## **The Best of The Best**

To: All my friends

The Dual Plate Check Valve features exceptional flow characteristics. The compact wafer style body is a one piece, retainerless model which eliminates potential leak paths. The dual discs are designed to provide maximum strength with minimum opening time. The full contact seats maintain positive shut-off at minimum working pressure.

These carbon steel check valves include:

- Carbon Steel Body
- 316SS Plates
- Viton Seat or Metal Seal
- Metal Spring

Available, of this list, in 150# and 300#.

Here is my buddy ACER, always around, like Sure Flow Best of Best.
